

07 First 100 Customers — Action Plan

Last updated: 2026-06-14, Asia/Colombo.

Owners: **Ovindu** (go-to-market) · **Suven** (build) · Claude Code (drafts build tasks for Suven to review/own).

This is the execution plan that operationalises the research in [01 Market Research](#) -> [06 Gap List](#). Read those for the "why." This doc is the "what to do, who does it, and in what order."

TL;DR — the strategy in 5 lines

1. **Every Dinaya booking page is a billboard.** Each business we onboard shows Dinaya to its entire customer base for free. We are going to *capture* that loop, not leave it on the table.
2. **Sell a finished booking page, not "software."** Close businesses on a live 20-minute WhatsApp video setup, and get them to broadcast their link to their own customers *before the call ends* — that manufactures the first real booking within hours.
3. **Saturate one cluster, not four cities.** Win one Colombo suburb/strip first; density makes referrals automatic.
4. **Three compounding waves get us to 100:** 0->30 founder-led, 30->70 referral loops, 70->100+ inbound from the "powered-by" loop + directory density.
5. **Build 4 growth mechanics** that turn manual hustle into compounding rate (Workstream B).

North star (from [02 Launch Plan](#)): **active businesses receiving real weekly bookings**. A signup is not a win; a *first real booking while the owner watches* is.

Targets & timeline

"Customer" = onboarded **and** booking-page-live. Paid conversion is tracked separately.

Phase	Window	Goal	Primary engine
Phase 0 — Prep	Week 0	Infra + cluster + 3 demo pages + capture page live	Build (Suven)
Phase 1 — Founder-led	Weeks 1–6	0 -> 30 live businesses	Ovindu: live concierge setups in one cluster
Phase 2 — Referral loops	Weeks 6–12	30 -> 70	Wedding-vendor cluster, stylist sub-links, "bring 3"
Phase 3 — Inbound/compounding	Weeks 12–20	70 -> 100+	"Powered-by" loop, Founding-100 wall, directory + Deals density, creators

Honest note: ****100 paying** in 20 weeks is a stretch; **100 onboarded & booking-live** is achievable** if the loops fire. Track both. Target $\geq$ 40% paid-conversion of active businesses by week 20.

Wave-1 funnel math (justifies the daily targets)

To onboard ~5/week we need, per day:

20 contacted -> ~5 replies (25%) -> ~2 interested (40% of replies)
-> ~1 setup call booked (50%) -> live page (70%+ of calls)

~ 5–7 live businesses/week. Six weeks ~ 30, before counting referrals. Concierge/live setup is what makes the back half of this funnel convert far above a "book a demo" motion.

Workstream A — Go-to-market (Ovindu)

A1. Pick the cluster (Day 1)

- One high-density area. Recommend a single Colombo suburb or one salon-dense road, not the whole of Colombo/Gampaha/Kandy/Galle.
- Why: owners on the same strip know each other -> word-of-mouth + in-person setups + locally useful directory/Deals faster.
- Deliverable: cluster named, ~40 candidate businesses identified.

A2. Build the lead sheet (Days 1–2)

Columns: [business](#), [vertical](#), [city/cluster](#), [IG/FB](#), [WhatsApp/phone](#), [Google Maps](#), [lead score \(/30\)](#), [code](#), [utm](#), [stage](#), [next follow-up](#), [source](#), [activation](#), [paid](#).

- Score 1–5 on the 6 signals in [04 Outreach](#); prioritise **20+/30**.
- Beachhead order: salons -> barbers -> nail studios -> spas -> **bridal makeup artists** (referral hubs) -> skin/aesthetic clinics -> fitness/wellness.

A3. The live-setup motion (the core rate lever) — Weeks 1–6

Replace "send me your menu" with a **live 20-minute WhatsApp video call**:

1. Screen-share, build the page *with* the owner from their IG/menu.
2. Turn on reminders + (optional) PayHere deposit.
3. Generate the booking URL + QR.
4. **Before hanging up**: owner posts the link to their IG story / WhatsApp status **and broadcasts it to their saved client contacts**. -> first booking within hours.
5. Schedule the 14-day check-in then and there.

Daily target (14–30 days), from [04](#):

- [] Add 15 leads · Contact 20 · Follow up 10 old · Book 2 setup calls · Complete 1 setup · Post 1 build-in-public update.

Risk reversal to use in the pitch: "If you don't get a booking in your first 14 days, we'll personally get you one — or keep Pro free."

A4. Referral loops (Weeks 6–12) — this is the 30->70 engine

- **Wedding/bridal cluster**: sign ONE respected bridal MUA -> ask for intros to her photographer / salon / event-vendor circle. One close unlocks ~10.
- **Stylist sub-links**: give each stylist/therapist their own booking sub-link to share with their personal regulars -> owner sees value fast.
- **Bring 3**: existing business earns 1 month Pro credit per qualified paying referral (manual; see Constraints).
- **Supply chain**: beauty-product distributors, salon-furniture suppliers, beauty schools (new-grad salon owners) = 1-to-many channels. Pitch co-marketing.

A5. Content / marketing engine (ongoing)

- **Build in public**: "Setting up booking pages for 100 Sri Lankan salons — here's #N." Tag the business -> they reshare -> free reach + a case study + their own promo, in one post. 5–7 short posts/week ([03 Content Calendar](#)).
- **Ride the festival calendar**: time hooks to Avurudu (April), Vesak, Christmas, wedding season, school terms — "Get booking-ready before the Avurudu rush."
- **Sinhala + Tamil** share-captions and WhatsApp templates (don't stay English-only).

- **Creators:** operator-creators (salon owners who post), nano/micro (1k–50k). Pay in service where possible (free appointment at a partner salon, filmed booking via Dinaya). Disclosure required.

Workstream B — Build (Suven)

Four growth mechanics, in priority order. Each turns manual effort into compounding rate. Brand constraint: **Cobalt primary, Violet engagement, Amber booking, Green availability — no pink/rose**. All public links must carry attribution params so we can measure each loop.

B1. "Powered by Dinaya" loop — HIGHEST PRIORITY · effort S (~half day)

Why: the single biggest free-leads lever. Every consumer who books at one of our businesses sees a soft CTA to get their own page.

- **Where:**
- Slim branded strip in `src/app/book/layout.tsx` (covers every booking page): "Powered by **Dinaya** — get a free booking page for your business ->".
- Stronger CTA card on `src/app/book/[slug]/confirmed/page.tsx` (the post-booking, highest-intent moment, next to `ReviewPrompt.tsx`).
- **Attribution:** link to `/start?utm_source=booking&utm_medium=powered_by&ref=<businessSlug>` so the referring business gets credit (feeds A4 "bring 3").
- **Acceptance:** appears on all `/book/*` pages and the confirmed page; click lands on the capture page with params persisted; respects brand colours; mobile-first.

B2. Founder-setup capture page — HIGH · effort M (~1 day)

Why: [06 Gap List](#) flags this as missing. Cold traffic from videos/the powered-by loop won't register a full account — give them a 30-second form instead.

- **Where:** new route `src/app/start/page.tsx` (and/or `/setup`). No auth.
- **Captures:** business name, vertical, city, IG/FB, WhatsApp, services blurb — plus the `utm_*` and `ref` params from the URL.
- **Writes to:** a `leads` table (Drizzle migration) surfaced in `/admin`, and fires a WhatsApp/Resend notification so Ovindu can start the live setup fast.
- **Acceptance:** submitting creates an admin-visible lead with source attribution; success state gives a "we'll WhatsApp you" message + optional direct WhatsApp link.

B3. "Founding 100" wall — MEDIUM · effort M (~1–1.5 days)

Why: scarcity + social proof + ego. Businesses want to be on it and will invite peers to join.

- **Where:** extend the existing `src/app/discover/page.tsx` directory (city-based discovery already exists) or add `src/app/founders/page.tsx` pulling the first N live businesses.
- **Needs:** a `foundingMember` flag/badge on the business record; ordered by onboard date; logo grid + city; live counter ("37 / 100").
- **Acceptance:** public page renders the founding cohort with badges and a live count; links each to its booking page.

B4. No-show / lost-revenue calculator — MEDIUM · effort S–M (~1 day)

Why: lead magnet that makes the pain numeric ("8 'DM to book' posts/wk × Rs 2,500 × 2 no-shows ~ Rs 20k/mo lost") and is shareable content.

- **Where:** `src/app/tools/no-show-calculator/page.tsx` (client component) or a section on the landing page.

- **Inputs:** avg service price, bookings/week, est. no-show %. **Output:** monthly LKR lost + "Dinaya deposits + reminders recover most of this."
- **Attribution:** end CTA -> /start?utm_source=calculator.
- **Acceptance:** computes live; CTA captures the lead with source.

B5. Tracking & attribution groundwork — MEDIUM, ongoing · effort M

- Ensure `utm_*` + `ref` are captured at signup (not just booking — they're already read in `src/app/api/bookings/route.ts`) and stored on the business/lead.
- Simple `/admin` acquisition view: leads by source -> signup -> setup -> first booking -> paid.
- **Promo codes:** keep **manual** for now (see Constraints). Scope the real feature only after referral/creator demand is proven — build order in [05 Promo Playbook](#).

Build priority order

B1 -> B2 -> B5 (capture path) -> B4 -> B3. B1+B2 together close the loop (consumer sees CTA -> lands on a real capture page -> Ovindu does a live setup).

Shared — metrics & weekly review

Weekly acquisition: leads added · contacted · replies · setup calls · onboarded · pages shared publicly · first bookings · paid.

The two numbers that matter most:

1. **Activation rate:** signup -> *first real booking* (the north-star event).
2. **Loop yield:** referrals per business (A4) and powered-by clicks -> signups (B1).

Weekly 30-min review (Ovindu + Suven): Which cluster/vertical converts best? Which loop is yielding? Re-point next week's effort at the winner. Don't spread; concentrate on what's working.

Constraints (do not break these)

- **No in-app promo codes yet.** Run `FOUNDER50` / `DINAYA60` etc. **manually** via DM + referral links + Dinaya Deals. Never promise auto-redemption at checkout until B-roadmap ships it.
- **AI Voice Receptionist = "coming soon."** It's a tease, never the primary CTA. Sell booking reliability first ([06](#)).
- **Lock the domain.** Production is `dinaya.lk`; the 30s VO script still says `dinaya.app`. Pick one before scaling any spend ([06 critical list](#)).
- **PDPA:** collect only what's needed; clear consent/opt-out; never export customer lists into ad/influencer workflows without permission ([01 Compliance](#)).
- **No "guaranteed X% more bookings"** claims without our own measured proof.

Week 1 checklist

Ovindu (GTM)

- [] Name the cluster; identify 40 candidate businesses.
- [] Build the lead sheet; score; mark the 20+/30 leads.
- [] Send 20 DMs/day using the [04](#) scripts (offer a free finished page, not a demo).
- [] Run 3 live-setup calls; get each to broadcast their link before hangup.
- [] Post build-in-public #1, tagging the first business.

Suven (build)

- [] Ship **B1** (powered-by loop on `book/layout.tsx` + `confirmed` page).
- [] Start **B2** (`/start` capture page -> `leads` table + admin + WhatsApp notify).
- [] Confirm `utm_*/ref` persistence at signup (**B5**).

Together

- [] Confirm 3 demo pages ready (salon, clinic, fitness).
 - [] Decide final public domain.
 - [] Set the weekly review slot.
-

Definition of done — "first 100"

- 100 businesses onboarded and booking-page-live in the beachhead.
- $\geq 40\%$ taking real bookings weekly (active).
- $\geq 40\%$ of active converted to a paid plan (Starter LKR 1,990 / Pro 3,990 / Growth 6,900).
- ≥ 5 public case studies; ≥ 3 creator/agency partners sending qualified leads.
- A repeatable, measured playbook for the winning vertical + cluster.
